

Task 2: API Integration

Fetch weather data using API and display results.

```
import requests

url = "https://api.openweathermap.org/data/2.5/weather"
params = {
    "q": "Chennai",
    "appid": "YOUR_API_KEY",
    "units": "metric"
}

response = requests.get(url, params=params)
data = response.json()

print("City:", data["name"])
print("Temperature:", data["main"]["temp"])
print("Weather:", data["weather"][0]["description"])
```
